github.com/tedahnn | linkedin.com/in/tedahnn/ | tedahn.com

Senior Software Engineer with 6+ years building event-driven, cloud-native systems across backend, infrastructure, and enterprise AI. Inventor of a patented Capital One Auto Navigator data integration processing 3M+ vehicle records daily.

SKILLS

Languages & Platforms: Java, Python, JavaScript | AWS, GCP, Kubernetes

Architecture & AI: Event-driven systems, context engineering, spec-driven development, multi-agent workflows, Claude

EXPERIENCE

CAPITAL ONE, Plano, TX
Senior Software Engineer

May 2022 - Present

- Independently delivered a high-priority Meta marketing pilot using spec-driven development; its success established a dedicated cross-functional team without disrupting parallel initiatives.
- Co-developed AI knowledge hubs with 27 distributed/IaC components and 11 internal platforms; created Claude and Windsurf context workflows adopted through 1,000+ skill clones, earning recognition for AI enablement.
- Strengthened enterprise SRE standards through automated failover and regional-isolation testing; prevented a partner-launch outage by automating a patch and diagnosing memory and thread leaks, earning an inaugural organization-wide award.
- Designed and patented an event-driven pipeline consolidating 3M+ vehicle records per day, replacing a 15-year-old legacy-coupled system and enabling downstream analytics and ML feature generation.

USAA, Plano, TX
Software Engineer

September 2019 - May 2022

- Built the company's first reactive, event-driven communication platform, processing 1M SMS messages per hour to deliver urgent notifications during life-threatening events and severe weather.
- Helped maintain a critical 35-year-old on-premises platform while developing its greenfield replacement with distributed systems, OpenShift, GitLab CI, and CI/CD practices, collaborating with the OpenShift platform team on implementation proofs of concept, shared libraries, and security patches.

US LINE WEBTOON, Los Angeles, CA
Data Analyst / Software Engineer Intern

May 2017 - Dec 2017

- Built a Spring MVC and Apache Spark batch job using precomputed behavior and traffic statistics to demonstrate a title-based recommendation concept.

PROJECTS

SMILE - Global Web - Stanford Mobile Inquiry-based Learning Environment

May 2026

- Co-established SMILE's engineering team and AI-assisted delivery system using spec-driven planning, multi-agent review, automated testing, GitHub Actions CI/CD, and GCP deployments.

EDUCATION

The University of Texas at Austin, Austin, TX
Postgraduate Certificate, Artificial Intelligence and Machine Learning

November 2025

The University of Texas at Dallas, Dallas, TX
Bachelor of Science, Computer Science

May 2019
